Manufacturing of Halal Pharmaceuticals

This book aims to cover the fundamental aspects of pharmaceutical manufacturing from the Islamic worldview to inspire students that whatever they do including very mundane routine work such as checking pH can be an *'ibādah* – if they work within the sphere of Islamic teachings and *in shā'* Allah all the time and effort will be rewarded by Allah SWT. The first chapter describes the Islamic perspectives towards the safeguarding of life vis-à-vis the use of medicines or pharmaceuticals and can be considered as an overview for the Islamic manufacturing practices. Although this book is about the manufacturing of pharmaceuticals, other industries may benefit from the discourse and examples given. As much as possible, processes and regulations are described in the book so that it covers the syllabus of industrial pharmacy for undergraduate use and still can be referred for postgraduate studies.

KAUSAR AHMAD, Ph.D., was with the manufacturing industry before she joined the Department of Pharmaceutical Technology, Kulliyah of Pharmacy at the International Islamic University Malaysia. She is a member of the International Institute of Halal Research and Training, International Society for Pharmaceutical Engineering, Institut Kimia Malaysia and is also attached at IKOP Sdn. Bhd. as the Chief Executive Officer.
